Hariram Gadariya	[0827CD231060]
Priyanshu Patidar	[0827CD243D03]

Challenges

Students struggle preparing for exams due to disorganized notes and lack of instant support, facing problem like:

- **Fragmented Materials:** Notes are scattered across drives and notebooks.
- **Wasted Time:** Manually combining redundant notes
- **No Instant Help:** Lack of real-time support for difficult topics.

Problem Statement

- Students waste critical exam preparation time manually cross-referencing disjointed peer notes.
- Existing tools lack an interactive, context-aware AI tutor to resolve student doubts instantly while they are reading the material.

This creates a learning gap, where students cannot understand why their logic is wrong.

Proposed Solution:

- Collaborative Forum: A centralized hub to upload diverse notes.
- AI Assistance: Get fast and accurate responses for Complex or Rare Topics or Uncovered Notes.
- Interactive Tutor: A built-in AI assistant to answer questions directly alongside the text.

Objectives

Goals SCHOLAR Aims to Achieve

- Use Large Language Models (LLMs) to deduplicate and structure the notes.
- Reduce overall exam preparation time.
- Integrate Agentic AI assistant for real-time Q&A.

TECHNOLOGIES

Overview of software and hardware requirements

- API : GPT-5, Github, AWS
- Databases: PostgreSQL
- AWS: Server Services, Cloud Upload
- Kotlin, Java : Android Development
- Python : Server Management and Forums
LLM Hosting, Agentic AI Development.

Thank You
